

WIDER1A | WIDER2A

WIDER1A

WIDER2A

FEATURES

- Tool-less access to the piston assembly
- More linear pattern adjustment capabilities
- Redesigned fluid and air inlet for simpler connection
- Excellent atomization for flawless finishes
- Stainless steel fluid passages are suitable for waterborne and solvent based materials
- Various nozzle options are available to achieve desired spray pattern
- Improved adjustment knobs operate with a smoother action
- Air cap can be quickly detached in half the time for cleaning and maintenance
- Air valve seat set doesn't need a special adjustment tool, so you can make changes on the spot

System Diagram

The WIDER1A and WIDER2A, which use built-in air valves, are able to spray if one three-way solenoid valve is available. You can leave the atomizing air connected, so you can spray without having to set up any complicated system. Pattern adjustment is done by manually turning the pattern adjustment knob, so remote operation is not possible.
