

# YOUR UV PRIMER SOLUTION

**LPH-300 | #3940**  
1.2 fluid set up

**LPH-80 | #4931**  
1.2 fluid set up

**#TeamIwata**

To effectively use UV Primer you need to use spray guns with proven efficiency; ones that provide smooth application as well as minimal overspray. The Anest Iwata LPH-300 for larger areas and the LPH-80 for touch-ups both provide excellent build and flatness while spraying at low pressures to assure the best utilization of material.
