

WIDER1AL × WIDER2AL

- HVLP models with consistent output and reduced overspray
- Tool-less removal of the paint adjustment assembly for easier maintenance
- Air valve seat design allows on-the-spot changes without specialized tools

Next-Generation HVLP Automatic Spray Guns

The WIDER1AL & WIDER2AL, successors to the LPA-100 and LPA-200 series

The WIDER1AL and WIDER2AL automatic spray guns, available in conventional and HVLP format, deliver improved controllability and ease of maintenance while preserving the performance that made the previous series widely adopted.

Featuring tool-less disassembly of key components for ease of maintenance, stainless steel fluid passages for solvent or water based coating usage, simplified adjustment mechanisms, and upgraded air fittings, the WIDER1AL and WIDER2AL maintain the same mounting dimensions as their predecessors, allowing for a direct swap without modifying existing production setups.

Designed for automated systems, these models offer robust, stable output ideal for high-precision applications like those found in industrial manufacturing.

ORDERING INFO

ITEM NO	MODEL
5306B-W	WIDER1AL-10E1
5308-W	WIDER2AL-12G2

Other configurations available. Reach out to your ANEST IWATA representative for info on availability and technical guidance.
